Let's Start!

Myths and Truths of Data Migration

Learning Outcome:

Implement data migration processes and data backups within the IT solution.

Understand the different types of data movements, making an emphasis on data migration movements as well as data backups.

Can Do Statements:

- I can talk about common misconceptions about data migration.
- I can describe some technologies that can be implemented for data migration.

Ask your partner:

- What are the common risks when migrating data?
- What "b plans" can you come up with to avoid losing data?

Let's Explore!

Leonard is a guest at a University radio show where he demystifies* data migration.

* To "demystify" means to clarify a subject that people usually speculate about.

Instructions: Read the text below.

- Host:** Tonight we have Leonard Cage, Ph.D. in IT and associate professor at this university. We welcome him to enlighten us and clear out some misconceptions we may have about data migration.
- Leonard:** Thank you, Joseph, for your invitation. Well, I've heard some comments from people who think that programming and information management are easy matters to address.
- Host:** That's right! But we'd like you to clarify this isn't a piece of cake. Some people have this blurry idea that working with IT is easy because of the constant use of technology.
- Leonard:** And it couldn't be farther from reality. It is true that data migration is challenging most of the time. However, it's not simply a matter of copy and paste; data requires transformation before it can be moved to a target source. It requires multiple attempts because projects are divided into phases and success is not always guaranteed.
- Host:** It must be something that requires lots of patience, I guess.
- Leonard:** It is. It is also a repetitive task because processes sometimes don't go as expected. To be honest, it gets really annoying, especially because data migration is a two-way based operation. People think it must be boring but, on the contrary, people are usually distressed when they need to meet the due date.
- Host:** Ok. Now, let's go through some technologies that can be implemented in data migration. People must be interested in knowing some.
- Leonard:** There are many, but the most common are Extract, Transform, and Load, known as ETL; hand coding, which is writing functional codes manually; and replication, which is a more elaborate process of copying data from a source and putting it in an elaborate server or computer where it's available for everyone.
- Host:** I'm a little confused, but we'll continue after the break.

Let's Practice!

Technologies improve the migration process.

Instructions: Read the sentences. Write in the missing words. Use: must be constructed / must be boring / must be / technology must be selected / must be interested.

1. I think data migration _____ something that requires lots of technology.
2. People think it _____; however, they are usually distressed when they need to meet the due date.
3. I think people _____ in knowing the common factors to be successful with the end users requirements.
4. We think _____ based on previous system requirements.
5. He thinks future migration _____ on previous experiences and the best technology practices.

Let's Practice!

Leonard is giving more details about data migration technologies.

Instructions: Read the clues. Complete the words with the missing letters.

1. It is true that data migration _____ most of the time.
 - a. is challenging
 - b. are challenging
 - c. is challenged
 - d. are challenged
2. It gets _____, especially because data migration is a two-way based operation.
 - a. really annoying
 - b. really annoyed
 - c. enough annoying
 - d. enough annoyed
3. It _____ when you have no available space to store data.
 - a. is frustrating
 - b. are frustrating
 - c. is frustrated
 - d. are frustrated
4. Don't be _____! Your data migration can't be threatened. Remember that there are plenty of tools to profile the data requirements.
 - a. disappointing
 - b. disappointed
 - c. disappoint
 - d. is disappointed
5. Using the ELT data migration technology _____ due to its ability to work together with many tools at the same time.
 - a. is convincing
 - b. are convincing
 - c. is convinced
 - d. are convinced

Extension Activity

Design an innovative loan system for your community.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about more data migration technologies.
- Write notes and design a comparative chart in which you describe each feature of those technologies.
- Show it to your partner and discuss advantages and disadvantages of each one.

Self-Assessment

Yes

No

- I look for information about more data migration technologies.
- I design a comparative chart to describe each feature of the migration technologies.
- I discuss advantages and disadvantages of each migration technologies.

☐ ☐
☐ ☐
☐ ☐

Target Words

- **blurry idea** (noun): a thought that is not clear or is not properly understood.
e.g. Some people have this blurry idea that working with IT is easy because of the constant use of technology.
- **attempt** (noun): every opportunity or try.
e.g. It requires multiple attempts because projects are divided into phases and success is not always guaranteed.
- **distressed** (adjective): to feel stressed or under pressure.
e.g. people are usually distressed when they need to meet the due date.
- **enlighten** (verb): to clarify or explain something.
e.g. We welcome him to enlighten us and clear out some misconceptions we may have about data migration.
- **misconception** (noun): a wrong idea or understanding about something.
e.g. We welcome him to enlighten us and clear out some misconceptions we may have about data migration.
- **piece of cake** (expression): something very easy to do.
e.g. But we'd like you to clarify this isn't a piece of cake.

Learning Points

Modal Verbs for speculating: Must

There are **modal verbs** used to make assumptions about something.

Must is a modal verb we can use to express certainty, it means, when we are sure something is the way we think. In this case, the speculation has a high probability of being real.

For example, let's say your boss is a very punctual person, but he didn't show up today for work. Taking into account that you had previous information of his car breaking down regularly, you can speculate about the situation. For example:

*He **must be** waiting for his car to be fixed.*

*His car **must be** damaged.*

That is the most possible situation because you have some hints and evidence to speculate about his car.

Examples

- *It **must be** something that requires lots of patience, I guess.*
- *People think it **must be** boring but on the contrary, people are usually distressed when they need to meet the due date.*
- *People **must be** interested in knowing some.*

Adjectives ending in -ed and -ing

Verbs can become **adjectives** by adding **-ed** or **-ing**

It is possible to turn a verb into an adjective with the use of **-ed** and **-ing** suffixes. Adjectives are used along with the **verb to be**; however, be careful because meanings change. Let's take a look at some examples:

*Data migration **is interesting**.*

This sentence means that **data migration** has the characteristic of being **captivating and fascinating**.

*People **are interested** in data migration.*

The second sentence, however, means that people **feel** curious about data migration.

To sum up, an **-ing adjective** mean that the subject has the characteristic. When you use the **-ed adjective**, you want to express that the subject feels in a certain manner.

Examples

- *It **is true** that data migration **is challenging** most of the time.*
- *To be honest, it **gets really annoying**, especially because data migration **is a two-way based operation**.*
- *People **must be interested** in knowing some.*
