Let's Start!

On the safe side: Why to back up?

Learning Outcome:

Implement data migration processes and data backups within the IT solution.
Understand the different types of data movements, making an emphasis on data migration movements as well as data backups.

Can Do Statements:

- I can talk about migrating data to the public cloud process.
- I can describe the elements that can be backed up.

Ask your partner:

- How many ways to store information do you know?
- Which way to store information do you prefer? Why?

Let's Explore!

Lyanna and John need to review what they have learned to pass with flying colors.*

* To "pass with flying colors" means to pass a test with a high grade and successfully.

Instructions: Read the text below.

- Lyanna:** Would you practice for the test with me?
- John:** Sure! The test should be a little bit difficult. We'd better review the topics.
- Lyanna:** Well, public cloud providers allow users to move data, even entire Virtual Machines may be uploaded. This narrows the possibilities of moving whole data.
- John:** Right, but there are cloud providers that have been offering services where VMs can be transferred.
- Lyanna:** True. And in case the user is not able to upload the VM, the file level migration works well most of the times. Some appliances also allow you to move and replicate data in local storage.
- John:** And that's advantageous because it improves the way people manage information. Don't forget that blocks of data can also be transferred or migrated.
- Lyanna:** Thanks for reminding me that. Now, let's move to the elements that can be backed up, shall we?
- John:** Ok. First, it is important to back up files. Having up-to-date data is always important and very practical. I've been continuously updating my info for two years. How about you?
- Lyanna:** So have I. A life saver! Once, my laptop crashed and I lost my final project; luckily, I had backed up my documents two days before. But let's continue with the elements.
- John:** Alright. Among the most important are documents, application data, and system. People have experienced the loss of such documents and they can't be easily restored. Once it's gone, it's gone forever.
- Lyanna:** True. But there are others like media, heirlooms, and even back up. Never trust only one back up system. Always play safe and have different sources from where you can get your files back. Though technology should be evolving continuously, it's better to prepare for disaster.

Let's Practice!

Lyanna has been having problems to migrate data. John has discovered what the problem is.

Instructions: Read the sentences. Underline all the mistakes in the paragraph.

1. Hey, these cloud providers have been allowed us to move the data to the Virtual Machines.
2. Yes, but some VM hasn't uploaded the whole data.
3. Has you being migrating the data to the correct Virtual Machines?
4. Mmmm, not sure. I have moving data to the public cold provider.
5. That's the problem. She has been transferred the data to the incorrect cloud provider.

Let's Practice!

John is describing the elements that can be backed up to save their information.

Instructions: Write the missing word(s) in the blank. Use: should have their laptops / elements that should / they should back up / the media should also / data should be backed.

1. Sometimes people forget that _____ their technological systems, they can crash easily.
2. Also, application _____ up to get important files back.
3. And of course, they _____ backed up as they save final projects and other documents.
4. Information on _____ be backed up because they work with very important information.
5. Other necessary _____ be backed up are the heirlooms, they save family memories.

Extension Activity

Design a mind map explaining the importance of having a back up for your files.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for ideas about the importance of 'back up' when saving files.
- Create a mind map in which you explain what a 'back up is' and its importance.
- Include other elements that can be backed up (use real life examples)
- Share your mind maps with your classmates.

Self-Assessment

Yes

No

- I search about the importance of a 'back up'.
- I make a mind map to explain a 'back up' in a simple way.
- I include real life examples of elements to back up.
- I show my mind map to classmates to discuss ideas.

☐ ☐
☐ ☐

Target Words

- **Virtual Machine** (noun): a simulator of an operative system, program, etc.
e.g. Well, public cloud providers allow users to move data, even entire Virtual Machines.
- **block** (noun): structured data with a maximum length which is used a measure as well.
e.g. Don't forget that blocks of data can also be transferred or migrated.
- **up-to-date** (adjective): something that exists according to the current time and trends.
e.g. Having up-to-date data is always important and very practical.
- **crash** (verb): to stop functioning suddenly.
e.g. Once, my laptop crashed and I lost my final project...
- **heirloom** (noun): family objects that pass through generations.
e.g. But there are others like media, heirlooms and even back up.
- **disaster** (noun): it refers to the moment when a system stops working and data is lost.
e.g. Though technology should be evolving continuously, it's better to prepare for disaster.

Learning Points

Present Perfect Continuous vs Present Perfect

Present perfect continuous and **present perfect** can be used to talk about actions that started in the past but affect the present.

Both tenses are used to talk about actions that started in the past but continue in the present or affect it somehow.

In **present perfect continuous**, the action started in the past and continues in the present. In **present perfect**, the action started in the past; and affects the present in some way. It is not certain if the action will continue in the future.

The **present perfect** uses the following structure:

Subject + have/has + past participle

Example:

*I **have walked** in that park several times.*

And the **present perfect continuous** uses this structure:

Subject + have/has + been + verb with -ing

Example:

*I **have been walking** in that park to reduce my weight.*

Examples

- *Right, but there are cloud providers that have been offering services where VMs can be transferred.*
- *I've been continuously updating my info for two years.*
- *People have experienced the loss of such documents and they can't be easily restored.*

Modal Verbs for Speculating - Should

There are **modal verbs** used to make assumptions about something.

In the English language, there are verbs with different functions depending on the context and tense they are used. In some cases, modal verbs express speculation, it means, something that can possibly happen.

Some speculation modal verbs are **can**, **could**, **may** and **might**. Furthermore, **should** is a modal verb that can also be used this way, though it's less common.

In this case, it's very important to pay attention to the context to find out if its obligation, a suggestion, or an assumption.

Examples

- *Sure! The test should be a little bit difficult. We'd better review the topics.*
- *Though technology should be evolving continuously, it's better to prepare for disaster.*
